

## 1.9m Industrial High Speed Digital Sublimation Printer

16\*Epson i3200-A1 heads: High Speed Maglev

Widely used: clothing, home decoration fabrics, T-shirt printing, canvas bags, cushions, scooters, flags, textile fabrics, etc Digital Sublimation Printer.

## • Technical Specifications

Model		Alpha 16
Print Head	Type Head Number Ink Size	i3200-A1 16 3.5 dpi
Print Speed	1 Pass 2 Pass	590 sqm/h / 460 LM/Hr 295 sqm/h / 230 LM/Hr
Ink	Kind Color Ink Supply Method Capacity	High-Concentration heat transfer ink C M Y K Syphon ink supply 25 L
Machine Width		1950mm
Print Width		1900mm
X-Axis Transn	nission	Maglev
Receiving and Dischange Structure		Rear release / Frequency conversion motor
Carryable Materials		3000 Meter
Material Specifications		≥30g
Drying Structure		External mulyi-stage automatic control wind and heat all-in-one dryer
Moisturizing S	tructure	Fully Automatic Cleaning And Moisturizing Components
Moisturizing S	tructure	Fully Automatic Cleaning And Moisturizing Components  Standardly equipped with and ruiyin beidou verison

## Technical characteristics of print head configuration

It adopts advanced board control technology, equipped with 15/16 i3200-A1 print heads and 3. 5pl ink droplets. The industrial-grade design ensures the durability of the printhead. The newautomated production scheme, high-strength industrialdesign structure, can be equipped with 3000 meters of rawpaper with performance, and the unattended automated production scheme can be fully realized, so that the productivity has been further improved.

(3000m)

- Post-receiving device, Awith a 3,000-meter whole roll of original paper carrying performance;
- High stability THK silent double guide rail, and improve the stability of printing to ensure high-quality continuous output;
- The air-guided suction platformmakes the material run smoothly, the paper is not easy to bulge, improves the output quality, and the platformcalibration and adjustment is more convenient;
- Multi-position guide roller material paper is more uniform, high-precision output, and it is not easy to have press wheel printing and paper wrinkle;
- The thickened wall panel structure is more stable for long-termhigh-speed operation, and can carry heavier materials;
- The front section + bottommulti-stage drying is more convenient for upper and lower materials, improves drying efficiency, and is more suitable for customers to print;
- Effectively solve the step deviation and speed difference caused by the diameter of different materials to ensure that the collection is neat:
- It can meet the needs of mass production, Linear motor, and improve production efficiency;

## Machine performance parameters

Front + bottomdrying device, stable and efficient, fast drying;

Automatic cleaning and moisturizing components ensure cleaning stability and provide a high quality working environment;

Ink-deficient alarmbeeping device provides customers with more intuitive and convenient services.

Plue roller feeding systemensures that the material is more stable and neat.

25L large ink barrel: Provide astable ink supply system to ensure amazing continuous printin;

The AC servo motor is combined with a high-quality reducer to providestable high-speed movement and smoother paper delivery;

Two external infrared drying systems are used for drying control at the front end and bottom;

High quality THK silent Maglev, lownoise, high precision, durable.
